## (54) CLAVICLE FRACTURE FIXING BAND

### (57)Abstract:

**PROBLEM TO BE SOLVED:** To surely press and fix a fracture region and prevent the radial nerve and the radial artery running the armpit from being pressed by passing back belts through rings on shoulder pads and then folding back the same to join hook-and-loop fasteners to each other.

**SOLUTION:** Connection between a shoulder pad 22 and back belts 3, 4 is performed by passing the belt through rings 27, 28 and fixing by hook-and-loop fasteners 3a, 3b, 4a, 4b, the rings 27, 28 are mounted on folding back parts 26, and a back pad 1 and a waist belt 9 are connected to each other through a tracting band 8 made of an elastic material. The inside of the shoulder pad 22 is filled with a cushion material, and further a core material 25 made by from a synthetic resin having flexibility is fixed to a part for covering the fracture part of the clavicle. Thus, even in a long time use, the belt is kept from biting into the armpit, and the position of the back pad can be always put in the initial state by a waist belt and the tracting belt so as to keep the bow-like physical condition of the clavicle.
